Fraction Operations

"Math Lib" Activity!

Description: Students generate pieces to a story as they travel through nine stations that review operations with fractions, including word problems. *Includes positive fractions only.

Station A – Adding Fractions
Station B – Subtracting Fractions
Station C – Multiplying Fractions
Station D – Dividing Fractions
Station E – Mixed Operations
Station F – Mixed Operations
Station G – Mixed Operations
Station H – Word Problems
Station I – Word Problems

Directions: Each station has 9 problems. You can either print them on cards and have students choose a card at each station, or, just hang the problems up. Also, place the solutions card at each station. Students choose a problem at each station, write it down on their worksheet, then simplify it. They look up the solution and write down the piece of the story beside it. I typically have them bring me the card they chose, or cross off the problem from the station so that the next group has to pick a different problem. They really like how each group gets a unique story. Note- you will be able to change Station A to names of teachers in your own building. Students love how their own teachers are the star of their story!

Sample stations with solutions:
