# MULTI-STEP EQUATIONS

## TASK CARD ACTIVITY

*Created by:* ALL THINGS ALGEBRA

# MULTI-STEP EQUATION TASK CARDS WITH QR CODES!

**Objective:** To practice solving multi-step equations. Problems included require distributing, combining like terms, and have variables on both sides of the equation. No solution and infinite solution are also included.

## Directions:

- 1) Print, cut, and laminate the 16 task cards. Also, copy enough recording worksheets for each student. These are the ways I have run this activity:
  - Place 2 cards at each station and have students move in groups of 3-4 from station to station after approximately 3 minutes. (This way you only have to copy one set of cards)
  - Students work in pairs and are given a card set. They work together to answer each card. You will need to print, cut, and laminate many sets. I typically prefer this because it leads to more one-on-one discussion.
- 2) They may check their answers by scanning the QR code on the card. A mobile device is required with a QR scanner app. An internet connection is not required to scan the code. It's very simple to set up, feel free to email me if you have any questions!
